

Samlex America's NTX Power Inverters impress with powerful performance in an innovative, simplified design

Burnaby, BC – September 7, 2021 – Samlex America introduces its eagerly awaited lineup of new NTX pure sine power inverters. Lightweight and compact, the NTX Series boasts exceptional performance and quiet operation. Its unique Hypersurge™ technology can support surge for longer, allowing it to start demanding loads with ease and efficiency. The new models continue the brand's legacy of reliable, go anywhere power, and the innovative new lineup adds even more value to the company's versatile solutions.

The [NTX Series](#) has been reimagined to deliver the same reliable, high-power performance of our flagship PST Series but with a simplified design, making pure sine power more affordable. The lineup comes with 4 new models ranging from 1000 to 3000 watts. Each NTX power inverter comes with the sleek NTX-RC remote included, for straightforward operation of the inverter. With the touch of a button, you can turn the inverter on and off without having to access hard to reach storage compartments in RV's and commercial vehicles.

The lightweight and compact design of the NTX series was developed specifically for small to mid-sized recreational and commercial vehicles. The NTX-1000-12 model boasts 1000 watts of power at only 5.4 lbs and 8.5 x 11 x 3.62 inches. The 1500W and 2000W models weigh 7.8 and 8.6 lbs respectively and share a slightly longer footprint at 8.5 x 13.11 x 3.62 inches. With two GFCI protected outlets and Hypersurge™ technology, they are the ideal choice for powering a fridge or microwave in Class B RVs, travel trailers, work vans and long-haul commercial trucks.

The NTX-3000-12 features an innovative 30 Amp NEMA L5-30R twist-lock outlet and mating plug for full power utilization and built-in GFCI protection without hardwiring. With its compact size at 8.5 x 17.75 x 3.62 inches and weighing only 12.0 lbs, the NTX-3000-12 is the lightest 3000W inverter of its kind.

The NTX Series is ETL safety certified for Canada and the US, as well as FCC (Federal Communications Commission) certified to ensure minimal electrical interference will occur while operating near sensitive equipment such as TVs, radios or phones. It also features a single load-controlled variable speed fan for quiet operation – little to no background noise while powering electronics.

"Synonymous with Samlex's reputation for reliable power and first-class performance, the NTX Series continues to raise the bar for the power inverter market," says President, Mike Hamanishi. "With its robust power and simplified design, the NTX series offers more diversity to our product offering, giving our customers more options to meet their power needs and budget."
